A new metering device for commercial refrigeration and chiller systems allows increased performance monitoring such that areas of improvement may be identified, leading to development of new energy-optimizing measures. The Showcase presentation will explore the technology, called ClimaCheck, and discuss data from four regional case studies.

A question and answer session follows the presentation.

Sponsored by the Bonneville Power Administration (BPA), these monthly webinars bring you the latest information about some of the promising energy efficiency technologies and practices that BPA is considering for future research opportunities or focus areas.
